

Obituary

Dr. Masataka Arima

We regret that Dr. Masataka Arima passed away on December 12, 2022. Dr. Arima was a giant pioneer in child neurology and medical care for children/people with disabilities, and well known for the report of Arima syndrome. His contribution to the Japanese Society of Child Neurology was so immense. He was an editorial/advisory board member of *Brain & Development* since the first issue of 1979.

We would like to send our heartfelt condolences to him and express our respect for his great accomplishment for pediatric neurology in the world.
